

LYNC MEDIA PRESENCE SYSTEM 275 (LMPS 275)

The LMPS finally enables the productive use of Microsoft Lync in larger conference facilities: While conventional Lync systems and their webcams are only of limited use in conference rooms, this fully integrated collaboration system combines the advantages of Lync's standards-based surface with a full-grown telepresence solution's image and sound quality, thus enabling efficient group work in real-time, HD video and audio conferencing, Instant Messaging and interactive content sharing even in large rooms. Thereby, with its elegant appearance and low mounting depth - all technical components are hidden behind individually configurable 19" drawers - the LMPS allows a flexible, discreet integration even into most ambitiously designed boardrooms of up to 8 meters depth.

MAIN FEATURES

- 2x 75" Full HD touch-displays
- Fully integrated Full HD Lync video conferencing system
- professional PTZ camera (optional SpeakerTrack- and/or Presentation Camera)
- 19" racks with front access and customised finishes
- Centralised media control via 10" touch panel
- High quality soundsystem
- Signal matrix for digital and analogue video and audio signals
- Silent air conditioning

LYNC MEDIA PRESENCE SYSTEM 275 (LMPS 275)

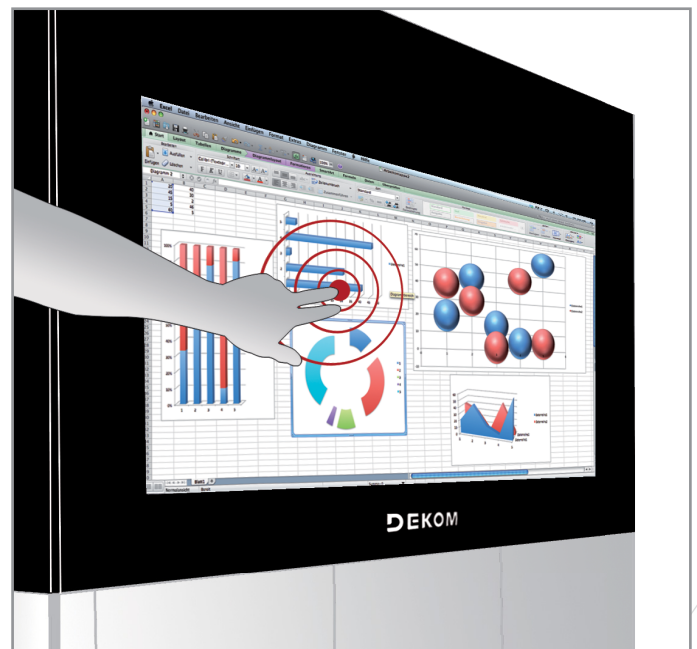

TECHNICAL DETAILS

LYNC

Today, companies and users require communication tools to facilitate their work, anywhere and anytime. With its workplace-based Lync solution, Microsoft offers a unified user interface that combines voice communications, Instant Messaging, interactive content sharing as well as audio, video and web conferencing into one comprehensive product. The Lync version of our award-winning Media Presence System brings this familiar user experience now also to the conference room: it provides even easier handling – and even more opportunities to collaborate with customers, partners and colleagues.

FULL HD TOUCH-DISPLAY

The intuitive interface of two 75" Full HD touch displays lets you collaborate with teams in real time, annotate documents, share your screen with other meeting participants via remote access, and much more. The patented technology thereby allows to seamlessly switch back and forth between writing with a pen and erasing with your palm – for example, to take and send notes during discussions. Screen contents, regardless of source, resolution or application, can not only be displayed stand-alone, but also directly transmitted into a videoconference at any time.

MPS MEDIA PRESENCE SYSTEM - WINNER OF THE IF PRODUCT DESIGN AWARD

The iF label is known around the world as a mark of quality for design excellence. For more than 50 years, this award has singled out and celebrated outstanding performance. The iF design awards owe their great international renown in particular to the top class competition entries.

LYNC MEDIA PRESENCE SYSTEM 275 (LMPS 275)

TECHNICAL DETAILS

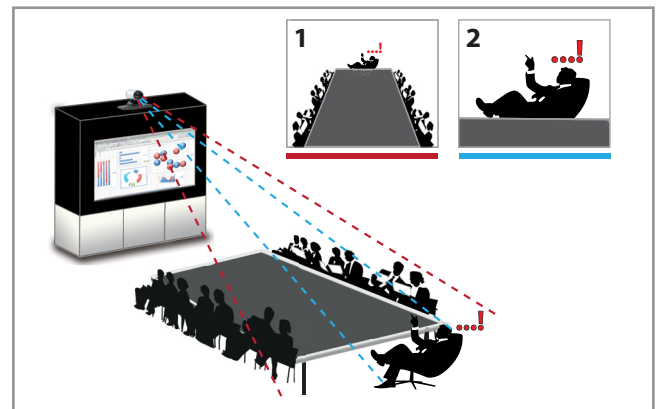

LYNC-INTEGRATED FULL HD VIDEOCONFERENCING SYSTEM

A professional full HD video conferencing system guarantees high resolution playback of high quality data signals and video images. A nearly invisible built-in camera ensures crystal-clear recording, and allows to freely and naturally communicate with interlocutors. Further camera options additionally refine your videoconferencing experience.

CAMERAS (OPTIONAL)

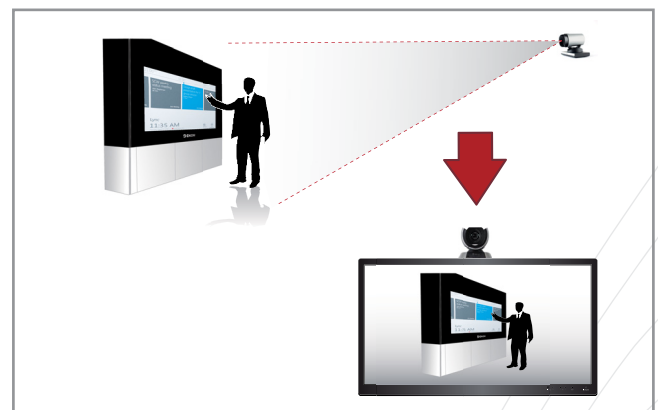

SpeakerTrack Camera

The optional SpeakerTrack camera detects, focuses and automatically displays the currently active speaker in fullscreen-mode, and thus creates a more personal and concentrated atmosphere for discussion.

Präsentationskamera

An optional secondary camera, positioned in the rear part of the room, provides connected participants with the present people's perspective, thus ensuring that the lecturer at the display is always visible for everyone during videoconferences. With additional recording/streaming products, it also offers the opportunity to record and provide presentations on-demand.

Why DEKOM?

As part of our comprehensive consultations, we look at the big picture, including an evaluation of our customers' network and communications infrastructure.

The backbone of our business is our own technical and development department, which supports the sales team by providing maintenance, service and individually customised products.

What video conferencing systems are actually available?

You can find a comparison chart showing all of the video conferencing systems available in Germany on www.dekom.com.

DEKOM also offers free live presentations - contact us for more information!

LYNC MEDIA PRESENCE SYSTEM 275 (LMPS 275)

TECHNICAL DETAILS

SOUND

Also in terms of audio quality, the LMPS presents an entirely new approach: in contrast to conventional systems, our optional, invisibly integrated sound system does not only look elegant, but also has a significantly improved microphone technology, offers more power, and can individually be adjusted to the specific acoustic properties of the room. Thus, intrusive loudspeakers, lack of microphone coverage, or poor audibility are thing of the past.

ADVANCED MEDIA CONTROL (OPTIONAL)

The LMPS is controlled via an included 10" touch panel – maintaining the familiar Lync-operation, but offering plenty of additional features: the optional, intelligent media control provides instant one-click access to all room and system technology such as light, shading, Digital Media, signal distribution and more. Join videoconferences, control cameras, close the blinds, dim the light or change the source of your presentation - all via one single touch panel.

HIDDEN TECHNOLOGY

Whether Mac or PC, whether ClickShare or Enzo: the LMPS provides full connection flexibility for any signal, respectively configured according to the specific individual conditions and needs. The entire technology is yet completely hidden behind smooth-running 19" drawers, and the deliberate choice of fanless components additionally reduces background noise to an absolute minimum.

The LMPS has a sophisticated, sensor-controlled ambient air convection system to protect the components: if the ambient temperature permanently remains above 25°, the system will automatically switch off after prior warning.

LYNC MEDIA PRESENCE SYSTEM 275 (LMPS 275)

VENEERS

Our fronts and cover plates are exclusively manufactured from the highest quality materials under the strictest quality controls and are perfectly coordinated. There are a wide range of designs to choose from – your options are unlimited, from white piano lacquer to genuine wood veneers.

Veneers are produced from a single trunk for each individual customer. This ensures that table surfaces, fronts and cover plates are precisely coordinated. High quality veneers are selected in the veneer plant based on the pattern, colour, treatment and overall quality. As a result, the technology is integrated almost invisibly.

Lacquered surfaces are applied in four consecutive layers for veneered surfaces, and up to seven consecutive layers for cabinets. A variety of lacquered surfaces and a wide range of genuine wood veneers allow us to meet customers' individual requirements.

Did you know?

Video conferencing systems have become part of an economically sound corporate strategy, and should be a vital element in a company's cost optimisation strategy and environmental image.

The cost savings and reductions in fossil fuel consumption are considerable, and a key factor in efficiency planning for companies of all sizes. This leads to greater profitability and increased long term value enhancement for all those involved.
